Attorney Docket No.: 915-400

Application No.: 09/990,133

IN THE CLAIMS

Please amend claims as follows:

1. (Currently amended) A housing for an electronica mobile telecommunication device

comprising a unitary tubular body having an open end for insertion of electronic components

therein, the body having a plurality of apertures in one face for receiving keys of a keymat

mounted on an inner wall of the body, and an opening in another face opposite the apertures

for receiving a battery pack, wherein the electronic components are substantially housed by the

unitary tubular body upon insertion.

2. (Original) A housing according to claim 1, including a member for closing the open end of

the tubular body.

3. (Original) A housing according to claim 2, wherein the member is configured to support

electronic components thereon.

4. (Original) A housing according to claim 3, wherein the member includes a support for

locating and retaining a printed circuit board thereon.

5. (Original) A housing according the claim 4, wherein said support includes an integrally

moulded clip to receive the edge of a printed circuit board and a location spigot to support the

underside thereof.

6. (Original) A housing according to claim 2, wherein a portion of the inner peripheral wall of

the member includes a recess to receive a transducer module.

7. (Original) A housing according to claim 2, including a guide on the body to receive and

support electronic components mounted on the member.

8. (Original) A housing according to claim 7, wherein the guide is a rail.

2

Attorney Docket No.: 915-400

Application No.: 09/990,133

9. (Canceled)

10. (Previously presented) A housing according to claim 1, wherein the body includes means

for releasably securing a keymat retaining plate over the keymat.

11. (Original) A housing according to claim 10, wherein said means comprises an integrally

formed tab on the body for location of the retaining plate thereunder.

12. (Original) A housing according to claim 11, wherein the retaining plate is formed from a

resilient flexible material and is a snap fit beneath the integrally formed tab on the body.

13. (Original) A housing according to claim 2, wherein a portion of the body overlaps the

member, said body and member including co-operating parts to mount the member on the

body.

14. (Original) A housing according to claim 13, wherein the co-operating parts includes a

flange on the member that forms an interference fit with the body.

15. (Original) A housing according to claim 13, including a lock for releasably securing the

member mounted to the body.

16. (Original) A housing according to claim 15, wherein said lock includes an aperture in the

member and a boss in the body, fastening means being insertable through the aperture for

location in the boss.

17. (Currently amended) An electronic A mobile telecommunication device incorporating the

housing according to claim 1.

3

Attorney Docket No.: 915-400

Application No.: 09/990,133

18. (Canceled) An electronic device according to claim 17, comprising a mobile

telecommunications device.

19. (Currently amended) The mobile telecommunication An electronic device according to

claim 1817, including a keymat, a keymat retaining plate and a battery pack, the retaining plate

being configured such that the keymat is biased against the housing by the retaining plate when

the battery pack is mounted in the housing.

20. (Currently amended) The mobile telecommunication An electronic device according to

claim 19, wherein the retaining plate includes resiliently deformable regions raised out of the

plane of the plate, said regions being deflected back towards the plane of the plate by the

battery pack mounted in the housing, thereby biasing the keymat against the housing.

21. (Currently amended) The mobile telecommunication An electronic device according to

claim 20, wherein said resiliently deformable regions are a plurality of spaced parallel ribs.

22-24. (Canceled)

25. (Currently amended) A method forof forming a housing of a mobile telecommunication

device, comprising forming a unitary tubular body having an open end for insertion of

electronic components therein for a mobile telecommunications device, and wherein the body

includes a plurality of apertures in one face for receiving keys of a keymat mounted on an

inner wall of the body, and an opening in another face opposite the apertures for receiving a

battery pack, and wherein the electronic components are substantially housed by the unitary

body upon insertion.

26. (Original) A method according to claim 25, wherein the housing is extruded.

4

Attorney Docket No.: 915-400 Application No.: 09/990,133

27. (Original) A method according to claim 25, wherein the housing is formed from sheet metal.

28. (Currently amended) A housing for a mobile telecommunication device, comprising:

means for substantially enclosing components of an electronic the mobile

telecommunication device inside a unitary tubular body, said components being inserted into the body through an open end of the body,

means for retaining a keymat to an inner wall of the unitary tubular body, the keymat having a plurality of keys each protruding through one of a plurality of apertures in one face of the unitary tubular body, and

means for receiving a battery pack through an opening on the unitary tubular body in another face opposite the apertures.

29. (Previously presented) The housing of claim 28, further comprising means for closing the open end of the unitary tubular body.
